

SkillShare

TeamSkillShare
@frahmeto on GitHub

Description

Allows users to lists skills they have, want to acquire, or want to share with others. Users can also create events around specific skills they want to share allowing others a free opportunity to learn something new.

Features

- Users can sign up, log in, and CRUD skills in their profile
- Users can CRUD events related to skills
- Users can search for others who have specific skills

Planning - User Stories

- We came up with SkillShare as a community resource, a free way of connecting people with one another to everyone's benefit
- Initially, we intended to build a tutoring service and kept thinking of less academic skills we wished we could learn or share

Planning - Database

- Tables for users, skills, skill categories, and events
- A table that stores usernames and hashed passwords
- A table that stores user profile info

Technology Stack

- Java
- Spring Boot
- Thymeleaf
- MySQL
- Bootstrap

What I Learned

- Extensive Bootstrap styling incorporated into app
- New technique (for example, connecting to an API or creating an admin dashboard)
- New feature or problem (for example, creating a user profile or pagination of data on the screen)
- Github workflow and git capabilities within IntelliJ IDE
- Structure of building a project (collaborating, setting goals, editing)

What's Next

- Adding community message board/forum
- Incorporating Google Calendar API for events
- Messaging between users
